What's In It For You?

As blended/online instructors, we spend an inordinate amount of time designing our courses, revising our documents, interacting with students . . . You name it; we spend time DOING it!

In this 50 minute session, we'll explore some "quick fixes" that you can apply to your course to save time by leveraging the tools within your LMS, while still providing an excellent learning experience for your students and meeting the standards of course design as detailed in the 6th edition of the Quality Matters Higher Education rubric.

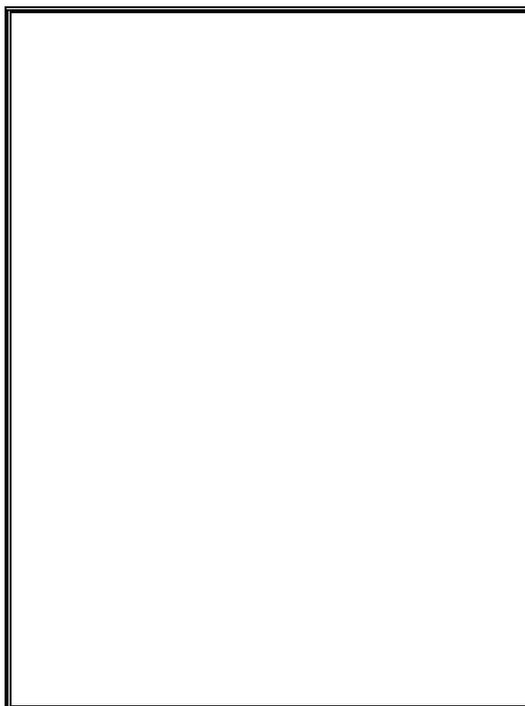

Furthermore, you will have ample opportunities to interact with your colleagues and to collect some best instructional practices from them! You will leave with an instructor's toolkit full of strategies that you can use immediately in your own courses.

Join me for 50 minutes of professional development that will highlight what you are already doing well and that will develop your design skills to a higher level.

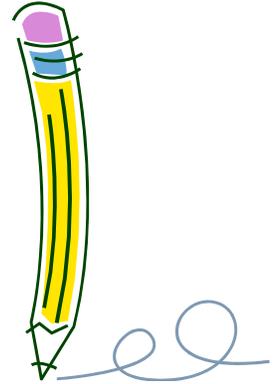

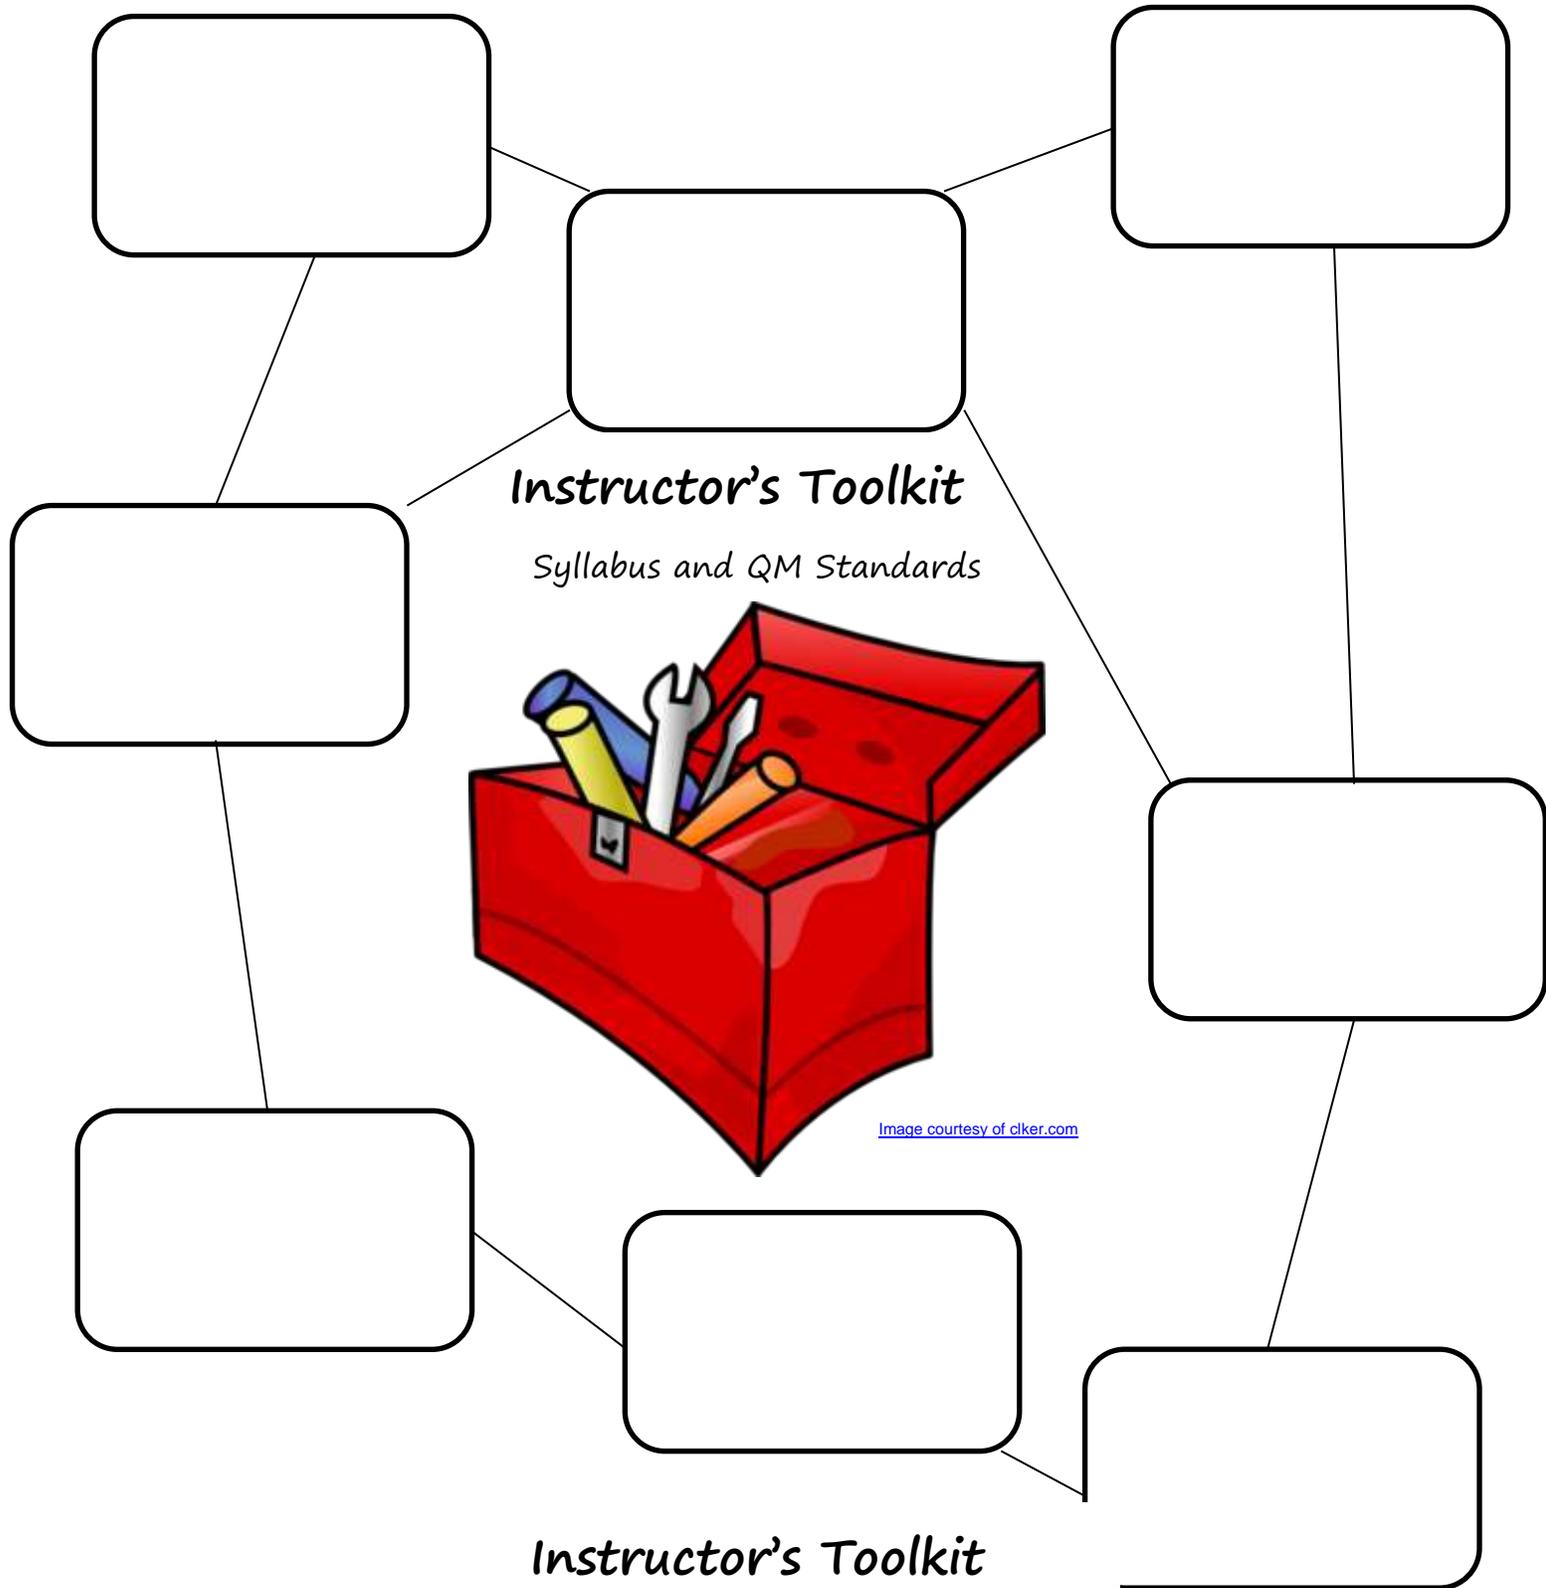

After actively participating in this learning experience, you will be able to:

- Identify tools within a LMS that can be leveraged to meet specific QM standards
- Evaluate the effectiveness of Learning Management System tools in meeting Quality Matters course design standards.
- Formulate a plan for incorporating available Learning Management System tools into course design to meet one or more specific Quality Matters standard(s).
